Packinglist-UNO R3

Preface

About Our Company

Founded in 2015, ELEGOO is a leading brand in the global smart manufacturing industry, specializing in R&D, manufacturing, and sales of consumer-grade 3D printers, laser engravers, STEM kits, and other smart technology products.
Located in Shenzhen, the Silicon Valley of China, we have grown to over 1000 employees with 42,000 square meters of office and manufacturing space.

About Our STEM Kits

Built on the open-source Arduino ecosystem, ELEGOO STEM Kits are designed to make hands-on learning accessible, engaging, and scalable for users of all ages. With a strong focus on modular design, complete step-by-step tutorials, and high expandability, ELEGOO has formed a three-tier STEM product matrix that supports everyone from first-time learners to advanced makers.

At the entry level, ELEGOO UNO R3 and Mega 2560 starter kits and ESP32 starter kits come with dozens to over 200 standardized electronic components and carefully structured learning guides. Users can quickly build circuits without soldering and learn C/C++ programming through practical projects with fully open and editable source code. This low barrier to entry makes it easy for beginners to build solid foundations in electronics and programming.

For advanced users, ELEGOO's intelligent robot kits include smart cars, self-balancing robots, FPV robot tanks, and more. These kits support obstacle avoidance, line tracking, visual recognition, and dual control via mobile app and infrared remote. Selected models are also compatible with LEGO building blocks, enabling deeper exploration of motion control, robotics, and machine vision while keeping learning both technical and fun. A wide range of supporting accessories—such as multicolor Dupont wires, solderless breadboards, and expansion boards—further enables flexible project development and creative customization.

ELEGOO STEM Kits have earned strong global recognition for both educational value and commercial performance. The brand ranks as a top Arduino-category seller on Amazon, with over 50% repurchase rate and multiple editor awards. Today, ELEGOO STEM products are used in more than 70 countries and adopted by over 70 universities and research institutions for teaching and project-based learning in robotics, aerospace, and engineering.

Continuous innovation is at the core of the product line. Based on user feedback, ELEGOO regularly upgrades hardware and tutorials, such as integrating sensor shield designs into UNO kits for easier wiring, and releases highly integrated Mega kits featuring 200+ components and 33 guided projects for a smoother learning experience.

Looking forward, the integration of ELEGOO STEM Kits with 3D printing technology unlocks a powerful cross-disciplinary ecosystem. Students can design and print custom mechanical structures before implementing electronic control. Makers can break free from standardized components through non-standard printed parts. Families can turn coding into hands-on creative play. Advanced developers can rapidly prototype functional devices with customized enclosures. Together, STEM Kits and 3D printing form a complete "design–build–program–iterate" innovation loop, empowering users to turn ideas into real-world creations faster than ever.

Our Tutorial

This tutorial is designed specifically for beginners. You will first systematically master the core basic knowledge of ESP32 development boards, individual sensors, and components. Building on this foundation, you will gradually learn to integrate multiple components to complete combined projects. As the learning difficulty progresses, you will also use Wi-Fi and Bluetooth functions to implement more advanced projects. In addition, the content of this tutorial has good scalability, which can adapt to more cutting-edge application scenarios with the iteration of future firmware and hardware versions.

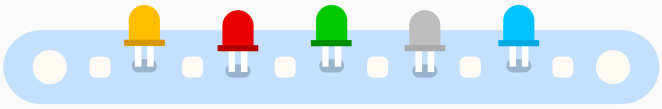

Customer Service

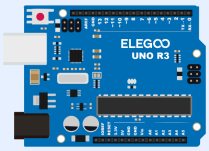

As a continuous and fast growing technology company we keep trying our best to offer you. Excellent products and quality service in order to meet your expectations and you can reach out to us by simply droping a line at service@elegoo.com or EUservice@elegoo.com. We look forward to hearing from you and any of your critical comment or suggestion would be much valuable to us.

Any problems and questions you have with our products will be promptly replied by our experienced engineers within 12 hours (24hrs during holiday)

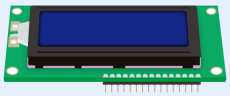

Packing List

01 PACKING LIST

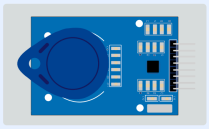

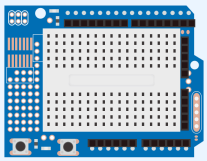

UNO R3 Controller Board x1

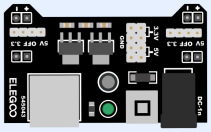

LCD1602 Module (with pin header) x1

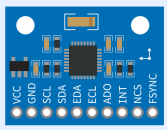

RC522 RFID Module x1

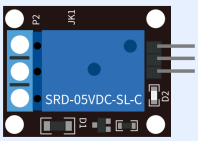

Prototype Expansion Module x1

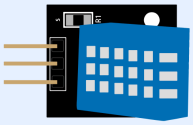

Power Supply Module x1

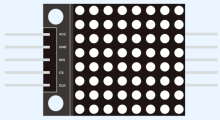

GY-6500 Module x1

5V Relay x1

DHT11 Temperatureand Humidity Module x1

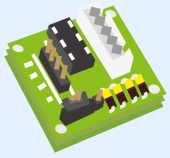

MAX7219 Module x1

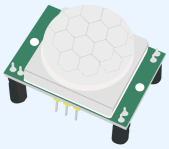

IR Receiver Module x1

Ultrasonic Sensor x1

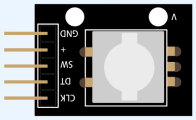

ULN2003 Stepper Motor Driver Module x1

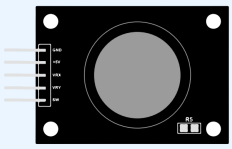

HC-SR501 PIR Motion Sensor Module x1

DS1307 RTC Module x1

Rotary Encoder Module x1

Joystick Module x1

Active Buzzer x1

Passive Buzzer x1

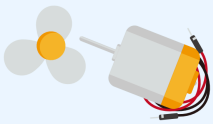

74HC595 IC x1

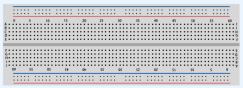

L293D IC x1

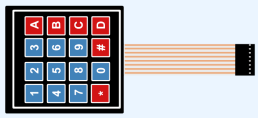

Tilt Ball switch x1

Fan Blade and 3-6V Motor x1

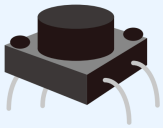

800 Tie-Points Breadboard x1

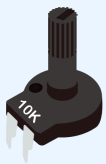

Membrane Switch Module x1

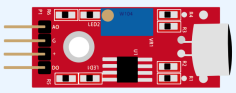

USB Cable x1

Button x5

Potentiometer 10K x2

Sound Sensor Module x1

Water Level Detection Sensor Module x1

9V Battery with Snap-on Connector clip x1

Remote Control x1

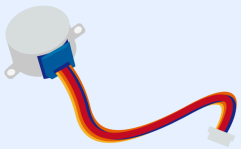

4 Digit 7-Segment Display x1

1 Digit 7-Segment Display x1

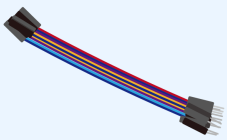

Servo Motor SG90 x1

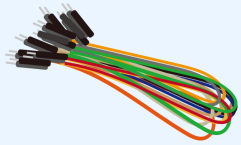

Stepper Motor x1

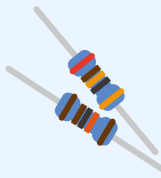

9V1A Adapter x1

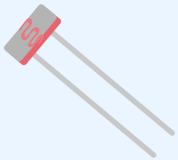

Female-to-Male Dupont Wire x20

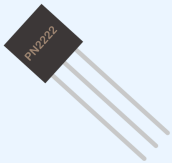

Breadboard Jumper Wire x65

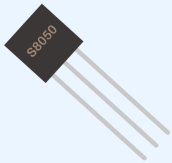

Resistor x120

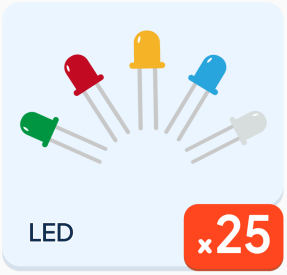

Photoresistor (Photocell) x2

NPN Transistor PN2222 x5

NPN Transistor S8050 x5
